

AI Tool Disclosure — Team Zephyrus

Relay delivery operations prototype

OpenAI ChatGPT and Codex were used as assistants during parts of the design and development process.

01 AI-assisted work

Assistance included implementation guidance; HTML, CSS and JavaScript generation or refinement; debugging; responsive UI improvements; QA and testing guidance; documentation drafting; and design refinement where applicable.

02 Human-owned work and decisions

Team Zephyrus interpreted the competition requirements and selected the final scope, workflow, priorities, and design decisions. The team reviewed the implementation and final design, and decided which AI suggestions to accept, modify, or reject.

03 How AI was used

AI was used iteratively as an assistant, not as an autonomous decision-maker. Generated suggestions were reviewed and tested before being retained.

FINAL RESPONSIBILITY

Team Zephyrus remains responsible for the final submitted work.
